Many men suffer from prostate enlargement after 50 years. Frequent urination during the day and at night, a weak urine flow are irritating symptoms of this problem, namely lower urinary tract symptoms (LUTS).

An enlarged prostate gland or benign prostatic hyperplasia (BPH) causes LUTS in male. This problem is non-life-threatening condition, therefore it should be treated safely. Unfortunately, BPH drugs, which are widely prescribed for urination symptoms relief, can cause new health problems.

That is why Thermobalancing Therapy, which has shown the ability to reverse prostate enlargement, is becoming popular among men with BPH. Many patients suffering from enlarged prostate have started using **non-invasive side-effects free**

Dr Allen's Device to manage this chronic disease. [Fine Treatment](#), an innovative healthcare company, manufactures and delivers this device to every customer's home.

Market of conventional treatments for LUTS / BPH

Enlarged prostate or BPH is an expanding market for both surgical devices and drugs, with projections of the market reaching \$20,097 million by 2025.

Drug companies have begun the trend of increasing the price of prescription drugs, stating that companies will raise prices for conventional drugs. These negotiations were met with sharp criticism, and even President Donald Trump put pressure on them to cancel the price increase, saying that there was no reason for that.

According to Prescient & Strategic market research, Urology surgical instrument market is projected to attain revenue of 13.7 billion dollars, and most of these funds will be used to increase the procedures for BPH.

Common side effects after standard treatments of BPH

BPH drugs and surgeries may cause **serious adverse events and complications**, such as weakness, retrograde ejaculation, impotence, diabetes. As a result of these new problems, men become depressed. Therefore, commonly prescribed standard treatments of BPH significantly reduce the quality of life of men.

Alternative treatments for BPH

Alternative treatments are being sought by many patients that are unable to pay for

rising deductibles, prescription costs and standard medical treatment.

Herbal pills and acupuncture can provide short-term improvement of urinary symptoms in men with BPH. For instance, Wei Zhang in the article: "Acupuncture for benign prostatic hyperplasia: A systematic review and meta-analysis" states that acupuncture in moderate to severe BPH provides short-term urinary symptoms relief.

Incidentally, **innovative Thermobalancing therapy has shown a unique possibility to reduce the size of enlarged prostate** and, consequently, decrease of LUTS.

BPH symptoms relief with Dr Allen's Device

Drug makers are under pressure as alternative treatment options are safe and offer a better overall outcome for many patients. A clinical trial proved the effectiveness of Thermobalancing therapy and confirmed the fact that this safe therapy reduces the size of enlarged prostate without medications and supplements.

The Aging men journal published a scientific article: "Use of Thermobalancing therapy in ageing male with benign prostatic hyperplasia with a focus on etiology and pathophysiology," which explains that the cause of BPH originates at the vascular level, and the prostate tissue growth occurs due to the pathological activity of capillaries. The starting point of prostate enlargement is constriction of capillaries with development of the focus of micro-hypothermia.

Thermobalancing therapy eliminates the focus of hypothermia stopping the process of enlargement. This therapy is entirely different than common heating treatments,

as Dr Allen's Device uses the own body energy **regulating localized temperature, maintaining it within the body heat. All other treatments with imposed heat** can be damaging, because the high temperatures destroy delicate cells of the already stressed organ.

For its exclusivity Thermobalancing therapy and Dr Allen's Device received a U.S. patent

Dr Allen's Device reduces the prostate size and LUTS gradually and improves men's quality of life. These positive changes are confirmed by a clinic trial. Furthermore, Dr Allen's Device was successfully used in men with BPH for over 10 years.

Dr Allen's Device is a class 1 medical device, which does not require the involvement of a notified body at any country. So, everyone can use it at home without worrying, as this treatment option causes no side effects. The delivery of Dr Allen's Device is guaranteed by Royal mail and USPS tracking services.
