We are pleased to offer free kidney stones treatment for people with kidney stone disease. Dr Allen's Device will be sent to a person who will fill out Questionnaire about the problem and report about his or her condition after using the device.

The time of report will vary from 2 to 6 months, depending on the condition and parameters of the person described in Questionnaire. For instance, a large kidney stone or long-lasting disease requires more time for positive results.

Everyone who wants to participate in free kidney stone

dissolving treatment should contact Fine Treatment, finetreatment@gmail.com or via the website, <http://finetreatment.com>

Kidney stones treatment with Dr Allen's Device is the effective and safe solution, as it uses own body energy to dissolve any type of renal calculi. Thermobalancing therapy with Dr Allen's Device has been patented in the US as "Therapeutic device and method".

The patent is an acknowledgement that it is indeed a completely new technique for chronic non-malignant diseases. Dr Allen's device improves blood circulation in kidneys, while applies natural thermoelements tightly to the body in the projection of both kidneys.

You should know that extracorporeal shock wave lithotripsy (ESWL) and percutaneous nephrolithotomy (PCNL) are risky and costly.

1. ESWL and PCNL can cause new health problems

ESWL and PCNL are the standard treatment options to remove kidney stone. Unfortunately, after these renal calculi removal procedures men and women can experience adverse events.

The common complications after these surgical

procedures are bleeding and infection, which in some cases may become extremely dangerous. For instance, after PCNL 3% of people can expect sepsis.

Long-term complications can include high blood pressure, diabetes mellitus and chronic kidney failure or chronic kidney disease.

An article, Shock wave lithotripsy associated with greater prevalence of hypertension, has indicated a small, but significant, increase in the risk of developing hypertension while using a third-generation electrohydraulic lithotripter.

Surgical procedures remove a kidney stone but do not stop formation of stones in kidneys. 50% of patients with kidney stone disease develop new renal calculi within next 5 years and face same problems and new bills for risky surgeries again.

2. Dr Allen's Device is free for you

Innovative Thermobalancing therapy with Dr Allen's device dissolves kidney stones without side effects and you can get it for free.

Recent feedback: I have been wearing the kidney stone device for two months straight. I have medullary

sponge kidney s and have several stones in each kidney this belt is fantastic as I no longer have the degree of pain as when first started.

A new understanding of the cause of kidney stones shows that their formation starts at the vascular level. The focus of hypothermia in the kidney tissue at the capillaries level occurs due to different triggers, such as excess of elements in blood or infection, etc. The continuous flow of safe energy that cannot harm the tissue of kidneys is the only way to eliminate this focus of hypothermia and, consequently, dissolve kidney stones. Indeed, Dr Allen's device is the only tool for this.

3. The first-line-treatment for kidney stones

Kidney stone disease is common because 12% in men and 6% in women are at risk of stone formation in the US, and the prevalence and incidence of kidney stones in the United States increases.

An article published in 2017, Burden of urolithiasis: trends in prevalence, treatments, and costs, shows that a new technique ureteroscopy (URS) can be used for small kidney stones that in some cases may be less expensive than ESWL, about \$ 8,000 for URS.

People who suffer from kidney stones usually have a working age, so they have direct and indirect costs of nephrolithiasis, taking their wages into account. Therefore, interventions that prevent stones recurrence may be a cost-effective component of kidney stones disease management.

Since Dr Allen's device dissolves stones without pain and can prevent the recurrence of stones we decided to show its effectiveness to everyone worldwide. So, if you suffer from kidney disease, do not miss this opportunity and contact Fine Treatment right now.

As Dr Allen's Device is a Class 1 medical device, everyone can use it at home without worrying, as this treatment is harmless, and Fine Treatment, <http://finetreatment.com>, delivers the innovative device to anyone's home in a week.
