

During the coronavirus pandemic, the value of treatment with Dr Allen's Device has risen to prominence like never before. Lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH) are occurring increasingly more often all over the world. This health condition is highly troubling for men. While very common, BPH is a slow-developing non-cancerous condition and, therefore, does not necessitate aggressive treatments, such as synthetic medications and surgery. In fact, most cases of BPH can be treated gently and safely with the innovative Dr Allen's Device.

Worn as a belt, Dr Allen's Device provides the gentle and harmless Thermobalancing therapy that stops prostate enlargement, reduces the size of enlarged prostate and LUTS. The superior at-home treatment with Dr Allen's Device is immensely helpful during the coronavirus (COVID-19) pandemic.

Serious measures have been taken in response to the COVID-19 (coronavirus) outbreak to protect patients and hospital staff. National governments have asked people to stay at home to prevent the wider spread of the virus. Dr Allen's Device offers an exceptional opportunity for every man to stay at home and effectively treat their prostate and urination problems.

The cause of prostate enlargement

The growth of non-cancerous prostate tissue begins due to changes at the capillary level, explains Dr Simon Allen. Indeed, these changes in microcirculation lead to the expansion of capillaries, which is the basis of angiogenesis and new tissue growth.

The initial triggers causing a capillary "malfunction" can be a cold, infection or stress. With age, they create a constant trigger inside the prostate gland, namely the focus of hypothermia. This trigger is responsible for additional growth of capillaries and the build-up of pressure inside the affected prostate – pushing the prostate to enlarge.

The clinically proven Thermobalancing therapy addresses capillary "malfunction" and shows remarkable treatment results. Wearing Dr Allen's Device improves blood circulation in the prostate tissue naturally. The unique design of Dr Allen's Device uses the naturally emitted body heat to warm up to the right level. It then channels the optimal amount of heat to the prostate eliminating the focus of hypothermia in the tissue, thus treating BPH at its cause.

Standard BPH treatments can harm

BPH drugs do not treat the cause of prostate enlargement. Alpha-blockers relax the muscles of the bladder, allowing urine to flow more easily. In the long term, these drugs can develop bladder muscle weakness and urinary incontinence, the so called "drug-induced urinary incontinence".

Alpha blockers and silodosin, such as Tamsulosin, Flomax, Terazosin, Rapaflo, Silodyx, and other drugs, often develop a whole variety of annoying side effects, such as retrograde ejaculation, fatigue, headache, dizziness, and sexual dysfunction.

5-alpha reductase inhibitors, such as Finasteride, Proscar and Avodart, are also responsible for many side effects, many of which can be irreversible, and include hair loss, sexual dysfunction, impotence, depression, headaches, dizziness, testicle pain, and even diabetes.

Minimally invasive surgical procedures simply cut out a part of the prostate gland – but the outcomes may not be that simple. These operations are responsible for irreversible side effects and health conditions that cause depression in almost 25% of men.

It therefore makes sense to accept BPH drugs and surgery only as the measures of last resort. A much more sensible approach is to start with a gentle treatment. And Dr Allen's Device comes up as the winner treatment.

Natural prostate treatment that reduces LUTS and improves wellbeing

Tackling BPH treatment with the non-invasive Dr Allen's Device is a proven way to preserve men's health and wellbeing. Thermobalancing therapy and Dr Allen's Devices have a patent issued by the USPTO and show compelling medical evidence that this is completely unique treatment for chronic pain and diseases actually works.

A clinical trial on the efficacy and safety of Thermobalancing therapy with Dr Allen's Device for BPH and LUTS was conducted for 3 years involving 248 men with BPH. The results confirmed both high effectiveness and complete safety of Dr Allen's Device. And the data has been published in scientific journals. Moreover, 10-year long empirical evidence strongly confirms that Dr Allen's Device helps men to reduce the prostate volume and ease lower urinary tract symptoms (LUTS).

Fine Treatment <https://finetreatment.com/> is a leading British healthcare company and an international supplier of Dr Allen's Devices. To make this treatment more accessible, Fine Treatment is offering a free international guaranteed delivery on all Dr Allen's Devices. Everyone can now receive Dr Allen's Devices at home.

Every man who is troubled by LUTS and BPH can now benefit from this user-friendly and effective prostate treatment with Dr Allen's Device in the safety of their home, avoiding unnecessary visits to clinics and hospitals and so minimizing the risks of getting coronavirus COVID-19 and passing it on to others. Staying at home saves lives, and Dr Allen's Device allows you to do just that.
