

## **News in benign prostatic hyperplasia cause support Thermobalancing BPH treatment at home**

A new experiment on the prostatic blood flow has established that chronic ischemia in the prostate contributes the development of benign prostatic hyperplasia (BPH). Thermobalancing treatment using Dr Allen's Device improves blood circulation in the prostate gland by removing ischemia and, consequently stopping prostate enlargement.

It is important as almost all men can expect having BPH or prostate enlargement with age. The number of men with enlarged prostate by age 85 climbs to 90%. BPH occurs 3 times more often than diabetes, and 7 times more often than asthma.

Urologists try to reduce the irritating symptoms of BPH, such as urinary frequency and urgency, weak urine outflow and others, via BPH drugs and surgical procedures. However, medications and surgeries do not treat the affected prostate, but only partially relieve symptoms, causing irreversible side effects and complications.

# STAY HOME

***Dr Allen's device terminates prostate ischemia***

Dr Fujiin in his recent article, Phosphodiesterase type 5 inhibitor attenuates chronic ischemia-induced prostatic hyperplasia in a rat model, has confirmed that chronic ischemia in the prostate is related to developing of prostatic hyperplasia.

Dr Allen's Device for prostate treatment accumulates the naturally emitted body heat and becomes a source of energy itself. This energy improves blood circulation in the prostate

tissue, terminating ischemia and stopping enlargement of the prostate.

### ***Thermobalancing treatment has proven efficacy***

The clinical study on Thermobalancing therapy has investigated 124 men with BPH during 6-month period has confirmed the efficacy of Thermobalancing therapy in reducing urinary symptoms and the size of enlarged prostate.

Thermobalancing therapy with Dr Allen's Device has been patented in the US as "Therapeutic device and method". The patent is an acknowledgement that it is a completely new BPH treatment, which uses own body energy for chronic non-malignant diseases. 10-year empirical evidence show that Dr. Allen's Device effectively reduces prostate volume and urinary symptoms in men with enlarged prostate at home that is immensely helpful during the coronavirus (COVID-19) pandemic.

### ***BPH standard treatments lead to new health problems***

BPH drugs are risky. They can develop the following side effects:

- Alpha blockers, which relax the muscle of the prostate and bladder neck allowing urine to flow more easily, Tamsulosin, terazosin, etc. These drugs can develop fatigue, headache, dizziness and sexual dysfunction.
- Hormonal drugs - 5 alpha reductase inhibitors: finasteride, Avodart responsible for irreversible side effects: impotence, depression, testicle pain, and even diabetes.

BPH drugs are becoming ineffective gradually, but the side effects do not disappear. That is why various surgical procedures to remove the prostate gland or part of it are offered. However, minimally invasive surgeries have unpleasant complications, such as increased risk of prostate cancer or sexual problems, which can cause depression, almost in 25% of patients.

### ***Thermobalancing therapy reverses BPH without complications.***

Dr Allen's Device is a class 1 medical device, so it does not require the involvement of a notified body. Every man with BPH can use it at home without worrying, as Thermobalancing treatment option is harmless.

Fine Treatment <https://finetreatment.com/> is a manufacturer and distributor of wearable therapeutic Dr Allen's Devices, delivering them worldwide. The price of delivery is included in the total price of the device, which is less than \$200.
