**Disadvantages of medical treatments with drugs and surgeries for BPH**

The Covid-19 pandemic is a serious problem for global and national health care providers. Non-selective or inappropriate medications should be avoided especially during a pandemic.

It very much concerns men with the enlarged prostate, as various medications used for BPH treatment can worsen their health in the event of a viral infection.

Conventional drug treatments for enlarged prostate, such as alpha blockers and 5-alpha-reductase inhibitors, may cause various types of sexual dysfunction, including erectile dysfunction, retrograde ejaculation, and the loss of libido. These new physical health problems often lead to mental health issues manifesting themselves in depression.

Clinical assessments carried out by Prof Diaz from the USA and Prof Adamowicz from Poland have showed that patients who take angiotensin receptor blockers face an increased risk of severe disease outcomes due to SARS-CoV-2 infections; and 5-alpha-reductase inhibitors commonly used for BPH treatment may be contributing to poorer prognosis in men.

### **Thermobalancing treatment with Dr Allen's Device reverses BPH without side effects**

The non-invasive Dr Allen's Device is designed as a comfy belt with a special thermoelement. Its design does not need electrical charging, as its smart material charges of the naturally emitted body heat.

Men can wear it at home, and it fits into the daily routine of its user easily. Thermobalancing therapy is a totally safe treatment option helping men to put any treatment worries they might have aside.

Fine Treatment is an innovative healthcare and medical devices company. Fine Treatment ensures that wearable therapeutic Dr Allen's Devices reach every person that needs them internationally. Moreover, a free international home delivery is on offer making Dr Allen's Devices accessible worldwide.

With precise temperature regulation locally, Dr Allen's Device and Thermobalancing therapy eliminate micro-hypothermia in the affected prostate at the capillary level tackling the cause of prostate enlargement.

This is why Dr Allen's Device is able to reduce the size of enlarged prostate. This safe treatment is truly unique, and not to be confused with a heat patch.

If you fancy reading scientific literature on this matter, a selection of scientific articles explaining the details of this medical treatment can be found on the Fine Treatment website.

Fine Treatment's effective at-home treatment with Dr Allen's Device is immensely helpful during the coronavirus (Covid-19) pandemic.

patients and the protection of health workers should be a priority during the epidemic.

It is, therefore, neither possible nor advisable to men, particularly older men, to be visiting clinics and hospitals routinely. Staying at home helps to avoid contracting Covid-19. So an effective at-home BPH treatment has become hugely important.

Novel Thermobalancing therapy and non-invasive Dr Allen's Device for Prostate Treatment are the only truly effective at-home solution that eases nasty BPH symptoms and works on the reduction of enlarged prostate in size.

This unique treatment method has received a US patent, and has been backed by clinical studies and a decade of successful treatment outcomes.
