

Enlarged prostate BPH treatment with Dr Allen's Device protects men during COVID-19

Dr Allen's Device provides at-home treatment of benign prostatic hyperplasia (BPH) or enlarged prostate without side effects. It is particularly important in a COVID-19 pandemic, as men can protect themselves from getting the virus in the clinics and hospitals.

COVID-19 is extremely contagious and has a serious impact on the aging men. Thus, hospitalized men with COVID-19 were 75% more likely to die than were women hospitalized with the respiratory disease. As BPH is a condition prevalent in adult men, affecting 42% of men in the fifth decade to almost 90% in men older than 80 years, aging men need to protect themselves as much as possible.

A recent article: Clinical features and outcomes of COVID-19 patients with benign prostatic hyperplasia in ageing male, in the International Journal of Clinical Practice, states that between March 18, 2020 and April 5, 2020, from 18 BPH patients who were admitted and treated in hospital - 10 (55.5%) were infected with the virus, 2 of them transferred to intensive care unit and one man died.

This is convincing evidence that men with an enlarged prostate should avoid unnecessary visits to doctors and urologists in clinics and hospitals. Fine Treatment <https://finetreatment.com/> is a manufacturer and distributor of wearable therapeutic Dr Allen's Devices for at home BPH treatment, delivering them worldwide. Over 10 years this safe at-home treatment helps men with BPH to reduce the size of the enlarged prostate and urinary symptoms.

What should people know about Dr Allen's Device

Thermobalancing therapy with Dr Allen's Device was patented by the United States Patent and Trademark Office that confirms that this is a completely new method for the treatment of chronic diseases, including prostate enlargement or BPH.

A new article published in the International Journal of Quality Innovation: Innovative Thermobalancing therapy and Dr Allen's Device for the first time employ body energy to

treat chronic prostatic diseases effectively, discusses opportunity to use a new method for treatment chronic conditions of internal organ

<https://jqualityinnovation.springeropen.com/articles/10.1186/s40887-020-00035-0>.

This publication on Thermobalancing therapy by Springer Nature, a leading scientific publisher at finding innovative solutions to scientists' information, indicates the need to update the standard methods of treatment of BPH with using Dr Allen Device.

Compare BPH treatment which are offered

Urologists will offer men with enlarged prostate drugs and surgeries. Alpha-blockers, tamsulosin, terazosin, etc., can develop retrograde ejaculation, headache, dizziness, fatigue, sexual dysfunction and even dementia. The 5 alpha reductase inhibitors: finasteride, dutasteride, Avodart are responsible for irreversible side effects: impotence, depression, testicle pain, and even diabetes.

Thus, BPH drugs are risky and moreover they are becoming ineffective gradually. Various surgical procedures to remove the prostate gland or part of it have unpleasant complications, which can cause depression, almost in 25% of patients.

Dr Allen's Device is a class 1 medical device, so it does not require the involvement of a notified body. Every man with BPH can use it at home without worrying, as Thermobalancing treatment option is harmless. Furthermore, 10-year observation and a clinical study on Thermobalancing therapy has confirmed the efficacy of Dr Allen's Device in reducing urinary symptoms and the size of enlarged prostate.

The clinical controlled study was conducted in 124 men with BPH and confirmed the effectiveness and safety of Dr Allen's Device. Most unpleasant symptoms disappear within a few days or weeks, gradually improving symptoms of sexual dysfunction, improving potency and libido. Many scientific articles were published in peer-reviewed medical journals, see medical-scientific-data on the Fine Treatment website.
