This article: Innovative Thermobalancing therapy and Dr Allen's Device for the first time employ body energy to treat chronic prostatic diseases effectively, discusses opportunity to use a new method for treatment chronic conditions of internal organ.

Prof Sang Lee, from University Eminent Scholar Emeritus of University of Nebraska–Lincoln, USA, Editor-in-Chief of the IJQI, clarifies the changing role of quality innovation, which performs a number of functions, from simply creating new value for the client to the desire to influence smart organisations and societies. Thus, the publication on Thermobalancing therapy by Springer Nature, a leading scientific publisher at finding innovative solutions to scientists' information, indicates the need to update the standard methods of treatment of chronic prostate diseases with using the wearable Dr Allen Device.

Why is it important to talk about this discovery?

Thermobalancing therapy is a fully new treatment method. Neither in ancient medicine in Greece, India, Rome, China and Egypt, nor in modern and alternative methods of treatment, such a treatment option has never been proposed. Thermobalancing therapy and Dr Allen's Device have received a US patent as "Therapeutic device and method."

BPH and CP / CPPS are very common conditions that affect men worldwide. Most of men with BPH suffer from lower urinary tract symptoms (LUTS). BPH is caused by continuous enlargement of the prostate, can be diagnosed in about 50 percent of men between the ages of 51 and 60, and up to 90 percent of men over 80 in the United States. The main symptom of CP / CPPS is chronic pelvic pain. CP / CPPS is caused by inflammation in the prostate gland and can affect up to 8% of men of different ages.

The article in IJQI, Innovative Thermobalancing therapy and Dr Allen's Device for the first time employ body energy to treat chronic prostatic diseases effectively, explains that BPH and CP / CPPS can be treated with the same Dr Allen's Device. This is the new way for treating different chronic prostate diseases: enlarged and inflamed prostate. This was made possible due to a new understanding that the cause of both chronic conditions is the pathological activity of capillaries.

This is also important because middle-aged or older men can receive Thermobalancing treatment at home without visiting clinics and hospitals, therefore minimizing the risk of receiving the virus from anyone. This new article explains that Dr Allen's Device with its proven efficacy can be widely used by healthcare providers, especially in a pandemic.

When choosing which BPH treatment do you want to receive?

The conventional medical treatments for BPH patients are drugs and surgeries. Alpha blockers, tamsulosin, terazosin, etc., can develop retrograde ejaculation, headache, dizziness, fatigue and sexual dysfunction. The 5 alpha reductase inhibitors: finasteride, dutasteride, Avodart are responsible for irreversible side effects: impotence, depression, testicle pain, and even diabetes. Thus, BPH drugs are risky and moreover they are becoming ineffective gradually. Various surgical procedures to remove the prostate gland or part of it have unpleasant complications, which can cause depression, almost in 25% of patients.

Dr Allen's Device is a class 1 medical device, so it does not require the involvement of a notified body. Every man with BPH can use it at home without worrying, as Thermobalancing treatment option is harmless. Furthermore, 10-year observation and the clinical study on Thermobalancing therapy has confirmed the efficacy of Dr Allen's Device in reducing urinary symptoms and the size of enlarged prostate. Fine Treatment <https://finetreatment.com/> is a manufacturer and distributor of wearable therapeutic Dr Allen's Devices, delivering them worldwide. The price of delivery is included in the total price of the device.
